How Businesses Can Benefit From GPS Tracking Applications

By **Robert Steward** • President and CEO of End2End, LLC

If supply chain and logistics are part of what your business does, you've probably considered using a **GPS tracking app** to track the location of your employees as they move from one place to another. It does not matter what kind of business you're running –if you have field staff, you need to know where they are and what they're doing so you can get the work done. Luckily for you, you can do all that with an employee tracking app that gives you your workers' precise GPS location and their location history.

However, with the myriad of GPS tracking apps on the market, choosing the right GPS tracking device can be a pain. With that in mind, we decided to help you streamline your location tracking and show you how an employee GPS tracking app can help you manage your employees and run your business better.

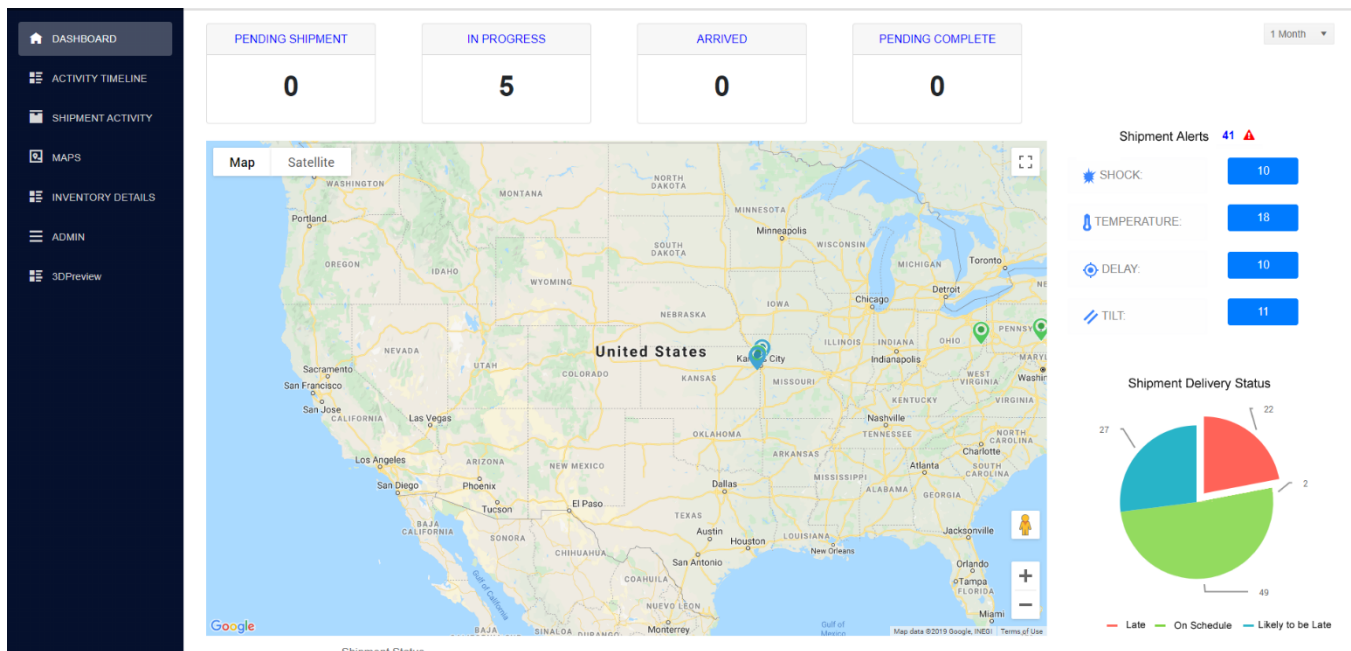

What is a GPS Tracking App?

Simply put, a time GPS tracking app offers businesses accurate GPS location services for companies of all shapes and sizes.

A GPS tracking unit is a device that vehicles or people can carry that uses GPS to track the device's movements and see its location in real-time. It goes beyond employee monitoring and location tracking to provide a tool to manage your company's logistics needs.

Nevertheless, to understand how a GPS tracker works, it's important to know that there are different types of GPS trackers.

Essentially, you have two kinds: **passive and active GPS trackers**. Passive GPS trackers only log information transmitted by satellites, but they cannot transmit it. Active GPS trackers use the internet to see satellite data. GPS tracking apps use cellphones to act as transmitters that take in location information and transmit it in real-time.

For instance, when you collect time and location information with a GPS tracking app, it allows you to see time spent commuting vs. time spent at a job or a client site. This gives you a clear picture of how your workers are performing.

In a nutshell, a GPS tracking app lets you know where your people are.

What to Expect From a GPS Tracking Applications

GPS apps are affordable, yet powerful versions of GPS tracking tools. The best thing about the GPS apps is that they can pull your employees' location history using a device most people own: a smartphone.

There's also an added benefit of using GPS tracking apps: you can integrate them with smart GPS tracking devices and enhance your tracking.

For more serious applications, you might want to use a GPS tracking app. Or you might as well use a location tracking app and a GPS tracking device together because both are specifically designed with location tracking in mind.

These devices cut down some of the unwanted functions that we often see on GPS apps, which makes them better suited for businesses. Also, with fewer background applications, your battery drains slowly, which also helps you pinpoint locations with greater accuracy. This is why a business-oriented GPS tracking app could help you better than a consumer-grade app or device.

From a logistics perspective, knowing where your assets and employees are, is essential in measuring quality, costs, and safety.

These are some of the things a GPS tracker can do for your company:

GPS receivers get your employees' positions using satellite information. That information is then turned into useful information by your tracking app, which receives the coordinates and transmits it to your network.

With the help of a mobile GPS tracking tool, you can instantly pinpoint the location of your workers and view all that information on any device that is connected to the internet. GPS tracking apps can be used for a variety of things, from the monitoring of company assets or valuables to the tracking of fleets and individual cars.

GPS trackers can help business owners keep an eye on personal property and valuables that are moving from one place to another or keep track of their workforce's whereabouts at a glance. However, it all depends on the use you and your business have in mind, because GPS tracking devices can come in a wide variety of styles, each designed to meet a set of specific needs.

GPS tracking helps you track things once they leave your premises

Here are some things a GPS tracking app can help your business with:

Check where your employees are at a certain point in time:

GPS tracking can help you track the location of your employees so you can keep an eye on the wellbeing and safety of your workers while on the clock. However, even for company-owned tracking devices that you use on your premises, you always need to ask for consent because your employees need to be aware that you're tracking them. Besides, even if you're not legally bound to do it, it enhances transparency and trust.

Set a geo-fence to keep your assets safe:

GPS location tracking enables companies to gain and leverage in-depth insights regarding parcel location and activity. Setting a geo-fence helps companies act quickly in the event that goods are misplaced and their whereabouts are uncertain. The device will provide detailed information to help avoid additional replacement costs.

Ensure quality control using location tracking

Location tracking is one of the most elevated forms of quality control. Factors like weather, unanticipated motion, and misplacement are often inevitable and can have an effect on how the consumer views the goods and services. GPS tracking apps and devices are designed to keep you informed and prepared to deliver quality goods to the consumer and establish a trusting relationship with them.

Business Benefits of GPS Location Tracking

Tracking technology has a broad range of applications, from GPS vehicle tracking for company vehicles and machinery to GPS tracking devices that can track packages and valuable items. GPS tracking has become a standard of many industries because it can help business owners track the location of their assets.

Theft and loss of valuable assets is a logistic nightmare. No matter how big the business is, losing your assets is a major problem—but it's a problem that you can easily protect yourself against.

Another important benefit is that location tracking can provide the protection businesses need at a price they can afford, especially with high-value assets. GPS tracking can help you secure your products by adding an invisible geo-fence to your chosen perimeter. That way, if your equipment leaves the premises, the person in charge will be notified and you can track where it has gone.

Final Considerations About Using GPS Tracking Applications

GPS tracking apps and devices can help you manage your employees, vehicles, and assets, but with the myriad of location tracking devices, it can be hard to choose between a tracking app or a device.

While there are similarities, and sometimes both overlap, both have distinct differences in their performance that every business owner needs to take into account.

But keep in mind that when choosing whether or not to use a GPS tracker app or a GPS tracking device to monitor the whereabouts of a person, it's critical to understand the legal aspects of doing so.

For instance, if you are tracking a vehicle, keep in mind that you can only track vehicles you own. Also, when you are tracking an employee, you need to do it with their explicit authorization; otherwise, you could be stalking them, which is illegal. That being said, it is always a good idea to learn about any current GPS tracking laws, consider the consequences, and be careful of respecting your workers' privacy.

ABOUT END2END

End2End™ is a fully linked, integrated software solution. With real-time collaboration of **people, projects, assets, and technology**, we bring fingertip visibility to **supply chain management**. With the ability to view any project, anytime, anywhere, End2End streamlines communication, collaboration, and execution, turning complexity and chaos into consistency and control. As a trusted partner, End2End provides **consulting, software as a service, and seamless integrations** to clients. From the first mile, to the last mile, to the last three feet — we deliver on our promise, so that you can deliver on yours. *And that's **Trust. Delivered.***
